

PERSONA: ALEX
(Junior Claims Adjuster)

BIO:
Alex has been an adjuster for two years. He's overwhelmed by the manual backlog but is eager to adopt new data-driven tools to work smarter.

NEEDS:
Speed up claim reviews, accurately detect subtle fraud patterns.

GOALS:
Increase efficiency (claims per day), improve accuracy, hit company KPIs for fraud reduction.

FRUSTRATIONS:
Missing sophisticated fraud, through endless paperwork, dealing with customer delays.

Insurance Claim Fraud Detection using Machine Learning

	PHASE 1: RECEIVE CLAIM	PHASE 2: MANUAL REVIEW	PHASE 3: RUN ML DETECTION	PHASE 4: DECIDE & ACTION
STEPS	Receive claim packet, gather reports.	Manually check details, compare with policy.	Log into Flask web app, input required 24 parameters. Click 'Predict'.	- Review ML result (Fraud/Legal flag). - Escalate suspicious or fast-track legal.
TOUCHPOINTS	 Email, physical  Files	 Excel, notepad	 Laptop browser, Project's Web App UI 	Internal dashboard
THOUGHTS	"Where do I start?"	"Something is off... can't put my finger on it. Tired."	"Let's see what the models found."	"This gives me confidence in escalation. Honest customers paid faster."
FEELINGS				
IDEAS / SOLUTIONS	Automated data ingestion	Pre-trained outlier detection	Real-time API, multi-model comparison	Explanation of fraud factors (features)
